Lisa,
I've attached sheets from the 60% submittal. And answers to no. 1 and 2 are below.

Thanks

Mark

1. High Street Phase II is estimated to start in early 2014. The construction will probably take 12 to 18 months
2. The pipe is a 8' high by 12' wide RCBC from the outfall at the Platt to the Pepsi Property after which it is 12' high by 8' wide. The pipe invert is from 13' to 22' below finish grade.

Mark - do you have a current timeline/description of the project I can give EPA (Items 1 and 2 below)?

Lisa,
I assume you are looking for these answers from us? Do you know if we collected enough soil samples for the EPA's requirements?
Does the EPA have the report the City of Denver did?

Thanks

Mark

Subject: Re: 40th Street Storm Sewer

Lisa - Thank you for your e:mail. EPA did not know about the City's plans for replacing a storm sewer within the limits of OU-02 @ VB/I-70. There are several types of information that we would need before we could adequately identify EPA's concerns. Overall, EPA's concerns would be protection of the public, the environment as well as the City workers performing the work.

Specifically, we would like the following information:

1. City's schedule for performing this work
2. The size of the storm sewer, its location and the depth of the excavation - a map would be very helpful
3. Plans that the City has developed for this work - materials handling, contamination and dust control, health and safety plan, etc.
4. Plans for disposing of any materials off-site - What type of characterization will the City conduct of the materials to be disposed of; where does the City envision disposing of these materials? Does the City plan to store any of the materials on-site - if so where and what type of containment would be used?

5. Does the City plan on collecting soil samples and having them analyzed - if so for what parameters? Does the City have a sampling plan that would meet the Superfund requirements?

Once EPA has more information about the City's plans for the replacement of the storm sewer, we would be able to more specifically outline any concerns that we may have. Please give me a call at your earliest convenience.

Thank you.

Lisa

Was contacting CDPHE and EPA on your list of action items resulting from the July 9th meeting regarding the High street outfall phase II project?

Please see the below correspondence. I just want to make sure that we are not counting on you to do something you don't know about.

Thank you

Dave,

We are still waiting to hear from Lisa Farrell regarding EPA and/or CDPHE permit requirements for work within the VB/I-70 Superfund Site. As a follow-up from our July 9th meeting, Lisa was going to contact EPA and CDPHE to discuss any permit requirements.

Regarding the CDPHE construction dewatering permit, we have asked CTL Thompson, Inc. to prepare the permit application on behalf of the City and submit to CDPHE. The permit will then be transferred to the contractor when construction starts.

Thanks,

Mike Galuzzi
Senior Engineer, WHPacific, Inc.

Mike

The only comment I had was that when the guidance from the EPA comes through we spoke of the need to capture the costs of the EPA dictated methodologies as stated in their permit. We talked about the EPA and CDPHE permits being applied for and then transferred to the contractor so that the full scope of work dictated in the permits can be captured costed and budgeted for.

Thank you

Dave Shaw
